(a) location–scale family (Fisher–Rao)

flare: $\sigma \to 0$
(high precision)

axis $u = -\ln \sigma \approx \frac{1}{2} \ln N$: an external clock

(b) Stein prior in Komaki's frame

$\|\mu\| \to 0$: origin at
infinite distance

axis $s = \frac{1}{2} \log \|\mu\|^2$; flat $ds^2 + d\Omega^2$

(c) James–Stein pullback, $d = 3$
